

FIRE DETECTION

Fire alarm systems are generally designed and installed in accordance with the guidance given in BS 5839 Part 1.

There are many types of fire alarm systems each suited to different building types and applications. A fire alarm system can vary dramatically in both price and complexity, from a single panel with a detector and sounder in a small commercial property to an addressable fire alarm system in a multi-occupancy building (Wikipedia)

When designing fire detection and alarm systems it is vital to get the complete solution correct, not only to meet legislative requirements but to ensure the highest standard of protection for life, property and possessions.

For your peace of mind all of our systems incorporate only the best products from leading manufacturers guaranteeing quality throughout all components.

GB Integrated Systems Ltd. is a specialist installer of fire detection systems with a dedicated in house team offering professional expertise in design, supply, installation, commissioning, maintenance and monitoring of all types of systems regardless of size and environment.
